

SYSTEM AND METHOD OF PROCESSING IMAGE DATA

5

ABSTRACT

10

In one embodiment, a system and method of processing image data in an image forming device is provided. The system can be configured to scan one or more sheets of print media and generate one or more image data pages. The one or more image data pages can be loaded into a memory as each image data page is generated. A first image data page can be copied into a page frame memory from the memory. The first image data page can be transmitted for imaging to an imaging mechanism where the transmitting can occur in parallel with the loading.
